Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides user interface for entering event details, interests, viewing conversation suggestions, fact checking, and downloading reports	Streamlit, HTML, CSS
API Gateway	Handles incoming API requests, validates data, and routes requests to appropriate services	FastAPI, Uvicorn
Microservices	Performs event analysis, topic extraction, conversation generation, history logging, feedback collection, and fact verification	Python, Transformers, Torch, Wikipedia-API
Database / Storage	Stores conversation history and user feedback for future access and analysis	JSON Files (history.json, feedback.json)
External API Integration	Retrieves verified information and NLP-based text analysis	Wikipedia API, Hugging Face Transformers
Testing Layer	Validates API endpoints and service functionality	PyTest
